

For us, cleanliness means reconciling ecology and profitability.

Spotlessly clean transport containers and production pans are imperative for the dispensing process and any other production processes. Cleanliness makes a major contribution to quality assurance. Therefore, we leave nothing to chance and develop the appropriate cleaning systems in-house.

A sophisticated combination of mechanical and chemical treatment optimises the consumption of cleaning media, making the cleaning process both efficient and reliable. The secret of success is finding exactly the right cleaning agent for the respective task and plant. Depending on the level of contamination, type and shape of the containers, either the spraying or brush technology is applied.

The careful use of resources and the safety of the users of such systems are particularly important to us. Both your customers and employees will value this in equal measure.

For us, precision means delivering the precise amount at the right place.

Dispensing systems by tecos bruhrin have a clever design, are extremely efficient and very easy to use. Therefore, you save time, gain flexibility and ultimately increase your profitability.

The exact results can be reproduced reliably at any time, enabling you to guarantee maximum consistency of quality and the highest precision. Speaking of quality – our range of services in the construction of dispensing and cleaning systems is complemented with customer-specific plants. Your benefit: we offer you high-quality, complete solutions from one source.

For us, versatility means looking for the perfect solution – and finding it.

Tecos Bruhin develops and constructs dispensing and cleaning systems, which are focused on customer benefit, for a multitude of industries worldwide.

- + Paints and coatings
- + Printing industry
- + Sealants and adhesives
- + Cosmetics and care products
- + Food products and flavors
- + Special chemicals and textiles

For us, reliability means keeping our promises – without compromise.

As your partner we are committed to providing maximum support – 24/7, globally. With regular maintenance, you will gain reliability in the production and value retention that is far above average.

Maintenance and services are investments that quickly pay off. Our systems are designed to be easy to maintain; original spare parts meet our high quality standards and are available at all times.

Our efficient network of representatives guarantees short response times when personal support and specific know-how is required. Regular software updates generate genuine added value – particularly within the context of a maintenance contract.

Available globally, in no time at all
